For optimal incision management.
The PREVENA™ Therapy portfolio of closed incision management solutions.
The PREVENA™ Incision Management System manages the surgical incision by:

- Helping to hold incision edges together
- Removing fluids and infectious materials
- Acting as a barrier to external contamination
- Delivering continuous negative pressure at -125mmHg up to 7 days

A number of published clinical studies in a variety of surgical incisions and patient populations have demonstrated that the PREVENA™ Incision Management System is associated with positive clinical outcomes compared to standard post operative dressings.¹
There are 8 million people at risk for healthcare-associated infections (HAIs)\(^2\).

Post-surgical complications can lead to significant costs:

**SSIs are 21.8%** of all healthcare associated infections\(^3\).

Infections increase average length of hospital stay to an extra **9.58 days** at an additional cost of **$38,656**\(^4\).

Other common complications include dehiscence, hematoma and seroma formation\(^5-7\).
PREVENA™ PEEL & PLACE™ SYSTEM

Designed for ease of use.

For use on linear incisions up to 13cm & 20cm in length.

Features and Advantages

**EASY TO USE THERAPY UNIT**

1. **One-button operation**
   - Turn therapy unit on and off and activate alert mute

2. **Audible and Visual alerts**
   - To notify patient and clinician of incidence of leaks, full canister, and low battery

3. **45ml canister**
   - Replaceable canister to allow storage of exudates away from the incision site

**INTEGRATED ONE-PIECE DRESSING**

1. **Foam bolster**
   - Manifolds negative pressure to the incision area

2. **Skin-friendly interface layer**
   - Wicks fluid away from the surface

3. **Stabilization layer**
   - Prevents film from wrinkling during application

4. **Adhesive film**
   - Creates a barrier to external contaminants
PREVENA PLUS™ Incision Management System

Designed for Flexibility

For use on linear, non-linear and intersecting incisions up to 90cm in length.

Features and Advantages

EASY TO USE THERAPY UNIT

1. One-button operation
   turn therapy unit on and off

2. Audible and Visual alerts
   to notify patient and clinician of leaks, full canister, and low battery

3. 150ml canister
   replaceable canister to allow storage of exudates away from the incision site

4. Rechargeable battery
   eliminates the need to replace batteries

CUSTOMIZABLE DRESSING

1. Foam bolster
   manifolds negative pressure to the incision

2. Skin-friendly interface layer
   wicks fluid away from the surface

3. Hydrocolloid strips
   secures dressing to application site and helps with sealing

4. SENSAT.R.A.C.™ Pad and Tubing
   provides SENSAT.R.A.C.™ Technology to monitor and maintain pressure at the incision site

5. V.A.C.® Drape
   covers and protects incision from external contamination
Summary

The PREVENA™ Incision Management System incorporates all of the functional elements of NPWT necessary for the management of a variety of closed surgical incisions. Our portfolio of portable and flexible dressings and therapy units provides combined benefits of ease of use and flexibility to manage and protect surgical incisions following primary closure.

It is optimized for patient safety with the following features:

- Visual and audible alarms
- Interface layer contains 0.019% ionic silver that may help reduce bacterial colonization within the interface fabric. The silver is not intended to treat infection.
- Replaceable canister holds exudate away from the incision site
